EDUCATION

University of Pennsylvania

Bachelors of Science in CS and Math; GPA: 3.7

Philadelphia, PA

Grad: 2029

EXPERIENCE

University of Pennsylvania Campbell Lab

Research Intern

Philadelphia, PA

Aug. 2025 - Present

- Applied AI-based object detection using YOLO and OpenCV to analyze zebrafish behavior following genetic modifications. Developed automated tracking systems using Python to monitor positioning, orientation, and swimming patterns.
- Built computer vision pipelines to process imaging data and generate statistical reports. Collaborated with neuroscience researchers to identify correlations between genetic modifications and behavioral phenotypes.

Penn Aerial Robotics

Software Developer

Philadelphia, PA

Aug. 2025 - Present

- Developed flight-control and autonomy software using PX4, ROS2, and Python for UAV testing and simulation. Implemented custom mission pipelines for autonomous navigation and obstacle avoidance.
- Applied computer vision techniques including Canny edge detection and optical flow using OpenCV and PyTorch. Built real-time image processing systems for drone navigation and object tracking.

MindX Sciences

App Development Intern

Remote

2024 - 2025

- Built comprehensive mental health tracking features for 2,000+ users using React Native and JavaScript. Implemented mood logging, journaling, and progress visualization components using React hooks and state management.
- Deployed beta builds via TestFlight and gathered user feedback through Firebase Analytics. Improved app load time through lazy loading and code splitting.

Next Gen Jane

Bioinformatics Intern

Remote

2024 - 2025

- Analyzed BRCA/fibroid trends in 800+ patient dataset using R and Python pandas. Applied statistical methods including chi-square tests and logistic regression to identify mutation patterns and age-related correlations.
- Developed 200+ interactive visualizations using Shiny R and ggplot2. Automated data processing workflows using Python scripts, reducing manual processing time.

BlastAI Summer Program

AI Research Intern

Remote

2022

- Developed, trained, and fine-tuned NLP models to detect and analyze emotional shifts across multi-turn dialogue chains on major social-media platforms. Processed datasets containing millions of comments to identify sentiment patterns.
- Co-authored IEEE Paper analyzing sentiment propagation across platforms using BERT and PyTorch to detect emotional shifts across social media platforms. Fine-tuned pretrained transformers on datasets containing millions of comments from Twitter, Reddit, and YouTube. [LINK](#)

CLUBS AND EXTRACURRICULARS

AI@Penn: Building AI-powered applications and software tools for campus initiatives. Learning startup formation, business development, and investor pitching through workshops and case studies

Wharton Statistics Society: Analyzing behavioral finance and investment data, building statistical models, and collaborating on research projects.

Penn Club Tennis: Competing in intercollegiate matches, participating in weekly team practices.

SKILLS

Languages: Python, Java, C#, JavaScript/TypeScript, R

Developer Tools: React, React Native, Node.js, PyTorch, TensorFlow, OpenCV, scikit-learn, pandas, NumPy, ggplot2, Shiny R, Git, AWS, Firebase, TestFlight, ROS2, PX4, Plotly
